Read this manual before using product. Failure to follow instructions and safety precautions can result in serious injury, death, or property damage. Keep manual for future reference.
This product has been designed and constructed according to general engineering standards\textsuperscript{a}. Other local regulations may apply and must be followed by the operator. We strongly recommend that all personnel associated with this equipment be trained in the correct operational and safety procedures required for this product. Periodic reviews of this manual with all employees should be standard practice. For your convenience, we include this sign-off sheet so you can record your periodic reviews.

1. Introduction

Thank you for purchasing a Westfield GULP2 Hopper. This equipment will allow safe and efficient operation when you read and follow all of the instructions contained in this manual. With proper care, your GULP2 Hopper will provide you with many years of trouble-free operation.

Keep this manual handy for frequent reference and to review with new personnel. A sign-off form is provided on the inside front cover for your convenience. If any information in this manual is not understood or if you need additional information, please contact your local distributor or dealer for assistance.

This manual should be regarded as part of the equipment. Suppliers of both new and second-hand equipment are advised to retain documentary evidence that this manual was provided with the equipment.

This manual describes the assembly and operation of the GULP2 Hopper, used as an accessory on MKX130 and MKX160 grain augers, and is intended as a supplement to your MKX Series Auger Operator Manual. Refer to the appropriate MKX Manual for additional Operating and Maintenance instructions.

Figure 1.1 GULP2 Hopper
2. Safety

2.1. Safety Alert Symbol and Signal Words

This safety alert symbol indicates important safety messages in this manual. When you see this symbol, be alert to the possibility of injury or death, carefully read the message that follows, and inform others.

**SIGNAL WORDS:** Note the use of the signal words DANGER, WARNING, CAUTION, and NOTICE with the safety messages. The appropriate signal word for each message has been selected using the definitions below as a guideline.

- **DANGER** Indicates an imminently hazardous situation that, if not avoided, will result in serious injury or death.
- **WARNING** Indicates a hazardous situation that, if not avoided, could result in serious injury or death.
- **CAUTION** Indicates a hazardous situation that, if not avoided, may result in minor or moderate injury.
- **NOTICE** Indicates a potentially hazardous situation that, if not avoided, may result in property damage.

2.2. General Safety

The safety information found throughout this complete Safety Section of the manual applies to all safety practices. Additional instructions specific to a certain safety practice (such as Operation Safety), can be found in the appropriate section.

**YOU** are responsible for the SAFE use and maintenance of your equipment. **YOU** must ensure that you and anyone else who is going to work around the equipment understands all procedures and related SAFETY information contained in this manual.

Remember, **YOU** are the key to safety. Good safety practices not only protect you, but also the people around you. Make these practices a working part of your safety program. All accidents can be avoided.

- It is the equipment owner, operator, and maintenance personnel's responsibility to read and understand ALL safety instructions, safety decals, and manuals and follow them when assembling, operating, or maintaining the equipment.
- Equipment owners must give instructions and review the information initially and annually with all personnel before allowing them to operate this product. Untrained users/operators expose themselves and bystanders to possible serious injury or death.
- This equipment is not intended to be used by children.
- Use this equipment for its intended purposes only.
- Do not modify the equipment in any way without written permission from the manufacturer. Unauthorized modification may impair the function and/or safety, and could affect the life of the equipment. Any unauthorized modification of the equipment will void the warranty.
2.3. Additional Safety Information

This manual is a supplement to the MKX Series Operator Manual. Please ensure that you have read and understood that manual.

2.4. Rotating Flighting Safety

**DANGER**

- KEEP AWAY from rotating flighting.
- DO NOT remove or modify flighting guards, doors, or covers. Keep in good working order. Have replaced if damaged.
- DO NOT operate the equipment without all guards, doors, and covers in place.
- NEVER touch the flighting. Use a stick or other tool to remove an obstruction or clean out.
- Shut off and lock out power to adjust, service, or clean.

2.5. Moving Conveyor Belt Safety

**WARNING**

- DO NOT step on or touch moving conveyor belt.
- Shut off and lock out power to adjust, service, or clean.

2.6. Rotating Parts Safety

**WARNING**

- Keep body, hair, and clothing away from rotating pulleys, belts, chains, and sprockets.
- Do not operate with any guard removed or modified. Keep guards in good working order.
- Shut off and remove key or lock out power source before inspecting or servicing machine.
2.7. Guards Safety

**WARNING**
- Install guards to prevent contact with moving parts.
- Do not operate equipment unless all guards are in place.
- Do not walk or step on guards.
- Lock out power before removing a guard.
- Ensure all guards are replaced after performing maintenance.

2.8. Hand Winch Safety

Where equipped:

**WARNING**
- Inspect lift cable before using. Replace if frayed or damaged. Make sure lift cable is seated properly in cable sheaves and cable clamps are secure.
- Tighten brake lock by turning winch handle clockwise at least two clicks after lowering equipment.
- Lower equipment fully before towing, then rotate winch handle until cable has light tension.
- Do not lubricate winch brake discs.

2.9. Work Area Safety

**WARNING**
- Have another trained person nearby who can shut down the equipment in case of accident.
- The work area should be kept clear of bystanders.
- Keep the work area clean and free of debris.
2.10. Drives and Lockout Safety

Inspect the power source(s) before using and know how to shut down in an emergency. Whenever you service or adjust your equipment, make sure you shut down and lock out your power source to prevent inadvertent start-up and hazardous energy release. Know the procedure(s) that applies to your equipment from the following power sources.

2.10.1. Hydraulic Power Safety

**WARNING**

**Power Source**

- Refer to the rules and regulations applicable to the power source operating your hydraulic drive.
• Do not connect or disconnect hydraulic lines while system is under pressure.
• Keep all hydraulic lines away from moving parts.
• Escaping hydraulic fluid under pressure will cause serious injury if it penetrates the skin surface (serious infection or toxic reaction can develop). See a doctor immediately if injured.
• Use metal or wood as a backstop when searching for hydraulic leaks and wear proper hand and eye protection.
• Check all hydraulic components are tight and in good condition. Replace any worn, cut, abraded, flattened, or crimped hoses.
• Clean the connections before connecting to equipment.
• Do not attempt any makeshift repairs to the hydraulic fittings or hoses with tape, clamps, or adhesive. The hydraulic system operates under extremely high pressure; such repairs will fail suddenly and create a hazardous and unsafe condition.

Lockout

• Always place all hydraulic controls in neutral and relieve system pressure before disconnecting or working on hydraulic system.

2.11. Personal Protective Equipment (Required to be Worn)

**Ear Protection**

• Wear ear protection to prevent hearing damage.

**Work Gloves**

• Wear work gloves to protect your hands from sharp and rough edges.

**Steel-Toe Boots**

• Wear steel-toe boots to protect feet from falling debris.

**Safety Glasses**

• Wear safety glasses at all times to protect eyes from debris.

**Dust Mask**

• Wear a dust mask to prevent breathing potentially harmful dust.

**Hard Hat**

• Wear a hard hat to help protect your head.

**Coveralls**

• Wear coveralls to protect skin.
2.11.1. Safety Equipment Required

**First-Aid Kit**
- Have a properly-stocked first-aid kit available for use should the need arise, and know how to use it.

**Fire Extinguisher**
- Provide a fire extinguisher for use in case of an accident. Store in a highly visible and accessible place.

2.12. Safety Decals

- Keep safety decals clean and legible at all times.
- Replace safety decals that are missing or have become illegible. See decal location figures that follow.
- Replaced parts must display the same decal(s) as the original part.
- Replacement safety decals are available **free of charge** from your distributor, dealer, or factory.

2.12.1. Decal Installation/Replacement

1. Decal area must be clean and dry, with a temperature above 50°F (10°C).
2. Decide on the exact position before you remove the backing paper.
3. Align the decal over the specified area and carefully press the small portion with the exposed sticky backing in place.
4. Slowly peel back the remaining paper and carefully smooth the remaining portion of the decal in place.
5. Small air pockets can be pierced with a pin and smoothed out using the sign backing paper.

2.12.2. Safety Decal Locations and Details

Replicas of the safety decals that are attached to the equipment and their messages are shown in the figure(s) that follow. Safe operation of the equipment requires that you familiarize yourself with the various safety decals and the areas or particular functions that the decals apply to, as well as the safety precautions that must be taken to avoid serious injury, death, or damage.

Westfield reserves the right to update safety decals without notice. Safety decals may not be exactly as shown.

Figure 2.3 Decal #20803

**WARNING**

MISSING GUARD HAZARD

To prevent serious injury or death, shut off power and reattach guard before operating machine.

Made in Canada 20803

Figure 2.4 Decal #20804

**WARNING**

ENTANGLEMENT HAZARD

To prevent serious injury or death:

- Keep body, hair, and clothing away from rotating pulleys, belts, chains, and sprockets.
- Do not operate with any guard removed or modified. Keep guards in good working order.
- Shut off and remove key or lock out power source before inspecting or servicing machine.

Made in Canada 20804

Figure 2.5 Decal #20806

**WARNING**

HIGH PRESSURE FLUID HAZARD

Hydraulic fluid can cause serious injury if it penetrates the skin. If it does, see a doctor immediately.

- Relieve pressure before unhooking hydraulic line.
- Wear proper hand and eye protection, and use wood or cardboard, not hands, when searching for leaks.

Made in Canada 20806
**Figure 2.6 Decal #20813**

**DANGER**

**ROTATING FLIGHTING HAZARD**

To prevent death or serious injury:

- KEEP AWAY from rotating auger flighting.
- DO NOT remove or modify auger flighting guards, doors, or covers. Keep in good working order. Have replaced if damaged.
- DO NOT operate the auger without all guards, doors, and covers in place.
- NEVER touch the auger flighting. Use a stick or other tool to remove an obstruction or clean out.
- Shut off and lock out power to adjust, service, or clean.

**CAUTION**

Made in Canada 21838
3. Assembly

Before continuing, ensure you have completely read and understood this manual’s Safety chapter, in addition to the safety information in the section(s) below.

3.1. Assembly Safety

**WARNING**

- Do not take chances with safety. The components can be large, heavy, and hard to handle. Always use the proper tools, rated lifting equipment, and lifting points for the job.
- Carry out assembly in a large open area with a level surface.
- Always have two or more people assembling the equipment.
- Make sure you have sufficient lighting for the work area.
- Tighten all fasteners according to their specifications. Do not replace or substitute bolts, nuts, or other hardware that is of lesser quality than the hardware supplied by the manufacturer.

3.2. General Assembly

The GULP2 hopper is available installed as part of the normal assembly of an MKX130 or MKX160 auger, as an option in place of the low profile hopper, or as a kit to replace an already-installed low-profile hopper.

Refer to the appropriate assembly manual for general assembly information, including auger assembly sequence and the standard list of tools required (installation of the GULP2 hopper replaces the installation of the Low Profile hopper in the auger assembly sequence).

See Table 3.1 for a list of assembly procedures required to assemble and install a GULP2 hopper, presented in the sequence that they should be performed.

a. Only required for GULP2 kit to replace a low-profile hopper.
b. The 3-Spool hydraulic control valve can be converted between closed center and open center by installing the appropriate conversion plug on the valve. See “Open/Closed-Center Valve Conversion” on page 57.
3.3. Verify Auger Assembly

During the assembly of the auger, the following standard parts must be replaced by parts modified to be compatible with the GULP2 hopper:

- intake-side single cross brace
- lift arm (installed with hydraulic winch)

3.3.1. Replace the Short Truss Brace (130/160)

During the assembly of the auger, ensure that the standard single truss brace tube closest to the boot is replaced by the short truss brace tube listed in Table 3.2 below.

1. Attach the GULP2 lift arm mount to lower-middle tube brackets:
   a. for MKX130 use six 1/2" x 1-1/4" bolts and locknuts.
   b. for MKX160 use six 1/2" x 1-1/2" bolts and locknuts.

2. MKX130 models: Position the new short truss brace tube between the truss tower and lift arm mount, and secure it with a 1/2" x 1-1/2" bolt and locknut at each end.

3. MKX160 models: Position the new short truss brace tube between the truss tower and lift arm mount. Secure to the joiner plate using a 1/2" x 1-3/4" bolt and locknut. Attach to the lift arm mount using a 3/4" locknut.

</tbody>
</table>
3.3.2. Install the GULP2 Hopper Lift Arm (130/160)

During the assembly of the auger, ensure that the standard lift arm is replaced by the lift arm listed in Table 3.3 below.

**Table 3.3 Replacement Lift Arm**

</tbody>
</table>

1. Position the hopper lift arm assembly on the GULP2 lift arm mount bracket with the arm overhanging the side of the auger that the hopper will be operating on.

2. Fasten the hopper lift arm assembly to the mount bracket with two lift arm attach pins (10-21575) and linch pins (10-29998).

**Figure 3.3 GULP2 Hopper Lift Arm**
3.4. GULP2 Hopper Assembly

3.4.1. Replace the Swing Tube Flight (130)

*Note:* This procedure is required only for the GULP2 kit to replace a low-profile hopper.

1. Remove the low-profile hopper and transition.
2. Lift and support the swing tube.
3. Open the spout head lid, and disconnect the swing flight roller chain coupler.
4. Remove the existing swing flight, and replace it with the GULP2 swing flight (10-22251).
5. Reconnect the swing flight chain coupler.

3.4.2. Remove the Transition (160)

*Note:* This procedure is required only for the GULP2 kit to replace a low-profile hopper.

1. Remove the low-profile hopper and transition.

3.4.3. Connect the GULP2 Transition to the Swing Tube (130)

*Note:* This procedure is only required for the GULP2 kit to replace a low-profile hopper.

1. Attach the GULP2 transition to the swing tube with twelve 7/16" X 1-1/4" bolts and locknuts.
2. Slide the pillow block bearing over the GULP2 swing flight shaft end that protrudes through the transition rear end plate.
3. Secure the pillow block bearing to transition rear end plate with two 1/2" X 2" bolts and locknuts.
4. Slide the 1" eccentric collar over the transition shaft until it is pressed against the pillow block bearing, tighten the collar using a steel punch, then secure the collar with the collar set screws.

</tbody>
</table>
Figure 3.4 Connecting the Transition to the Swing Tube

Figure 3.5 Attach the Pillow Block Bearing to Transition
3.4.4. Connect the GULP2 Transition to the Swing Tube (160)

1. Attach the GULP2 transition to the swing tube with twelve 5/8” X 1-1/2” bolts and locknuts.
2. Thoroughly grease two 1-3/4” flat washers, then place them fully onto the end of the swing flight shaft.
3. Place the bushing support onto the swing flight shaft and secure it in place with two 3/8” x 1” bolts, 3/8” flat washers and locknuts.
4. Insert a woodruff key into the swing flight shaft, then slide the u-joint onto the swing flight shaft.
5. Secure the u-joint to the swing flight with a 3/8” set screw, a 5/16” x 2-3/4” bolt and a locknut.
6. Slide the transition flight shaft into the u-joint.
7. Slide the pillow block bearing over the GULP2 swing flight shaft end that protrudes through the transition rear end plate.
8. Secure the pillow block bearing to transition rear end plate with two 1/2” X 2” bolts and locknuts.
9. Slide the 1” eccentric collar over the transition shaft until it is pressed against the pillow block bearing, tighten the collar using a steel punch, then secure the collar with the collar set screws.

Figure 3.7 Connecting the Transition to the Swing Tube (160)

Figure 3.8 Attach the Pillow Block Bearing to Transition
3.4.5. Attach the GULP2 Hopper to the Transition (130/160)

1. Raise and support the swing tube spout head on a stand about 50” high.
2. Attach the transition to the GULP2 Hopper with two 3/4” x 2” bolts and locknuts.
3. Raise the ramp-end of the GULP2 into the air until the transition-hopper chains can hook on the chain retainers on the transition.
4. Adjust chain positions so that the GULP2 does not drag on the ground when moving the power swing (this will vary for different bin heights).

Note: Ensure the hopper sits flat on the ground before driving over.

5. Ensure that the chains lock securely into the chain retainers, and release the ramp-end of the GULP2 hopper.

3.4.6. Install the 3-Spool Valve (130/160)

The 3-spool valve mounts on the swing tube using two half-clamp bands.

1. Position the valve mount approximately 24" from transition attach plate.
2. Secure the valve mount to the swing tube:
   a. for MKX130 models, use two 7/16" x 1-1/4" bolts and locknuts.
   b. for MKX160 models, use four 7/16" x 1-1/4" bolts and locknuts.
3. For MKX130 models only: Position the line-block half clamps 24" from the spout head. Secure the half-clamps to the swing tube using two 7/16" x 1-1/4" bolts and locknuts.

Figure 3.10 Installing the 3-Spool Valve (130/160)

Figure 3.11 Installing Line-Block Half-Clamps (130)
3.4.7. Attach the End Ramp (130/160)

1. Remove the ramp pin from the main pivot after removing the two linchpins.
2. Push the ramp into place against the end of the conveyor, aligning the rear ramp pivot tabs in the conveyor pivot.
3. Insert the ramp pin through the pivot tabs and the conveyor pivot, forming a functional pivoting hinge.
4. Replace the ramp pin linchpins.
5. Check that all three linchpins are securely inserted, including the linchpin that secures the pivot to the conveyor body.

Figure 3.12 Attaching the End Ramp
3.4.8. Connect the Hydraulic Hoses to the 3-Spool Valve (130/160)

*Note:* The GULP2 Hopper 3-Spool hydraulic control valve can be converted from closed center to open center by installing the open-center conversion plug on the valve. See “Open/Closed-Center Valve Conversion” on page 57.

*Note:* Use thread sealant (not supplied) on non-swivel connections.

1. Connect the hydraulic hoses between the 3-spool valve and the conveyor hydraulic motor (see Figure 3.13).
2. Secure hoses to transition using two line blocks, a 5/16” x 2-1/2” bolt, a flat washer and a locknut.
3. Install two 45 degree fittings into the power swing motor ports. Connect hydraulic hoses between the 3-spool valve and the power swing hydraulic motor.
4. Install two elbow fittings into the power swing hydraulic cylinder ports. Connect hydraulic hoses between the 3-spool valve and the hydraulic cylinder.
5. Secure hoses to transition using three line blocks, a 5/16” x 3” bolt, a flat washer, and a locknut.
6. Connect the hydraulic supply and return hoses to the 3-spool valve, and run the hoses up the swing tube to the boot hose storage position. Secure hoses to the swing tube using two line blocks, a 5/16” x 2-1/2” bolt, a flat washer and a locknut.
7. Install 1/2” pioneer couplers onto the other end of the hydraulic supply and return hoses.

3.5. Install the Hydraulic Winch (130/160)

1. Position the hydraulic winch on the winch mounting plate, and secure it using four 7/16” x 1-1/4” bolts and locknuts, as shown in Figure 3.14.

2. Feed the winch cable through the lift arm pulley, then feed the winch cable under the spool and connect it to the spool (minimum 3 wraps around the spool, feed cable through hole in side of spool, and secure with clamp and clamp hardware) as shown in Figure 3.15.

3. Connect the hydraulic hoses to the winch, and install pioneer couplings on the hose ends.

4. Thread both hoses through hydraulic hose upper catches on side of auger lower tube and boot. Tighten hydraulic hose upper catches slightly to hold hoses in place.

4. Transport

Before continuing, ensure you have completely read and understood this manual’s Safety chapter, in addition to the safety information in the section(s) below.

This manual is a supplement to the MKX Series Operator Manual. Please ensure that you have read and understood that manual.

4.1. Transport Safety

**WARNING**

- Do not transport a GULP2-equipped auger with the end ramp installed on the GULP2 hopper. Always disconnect the end ramp and store it securely on the transport vehicle before transport.
- Raise intake feed hopper into transport position and lock hopper lift winch before transporting or moving auger.
- Do not operate auger with GULP2 hopper in transport position. This will cause damage to the u-joint.
- Connect the transport chain before moving.
- GULP2 hopper must be in transport position when lowering, raising, or moving auger.

4.2. Transport Procedure

1. Lower the side flaps fully.
2. Disconnect the end ramp, and store it securely in the vehicle used to transport the auger.

**CAUTION** Lifting the end ramp requires two people due to its weight and size.
3. Reel out the lift arm cable until one of the hooks can be attached to the lifting point on a side ramp, then use the winch to lift that side ramp until it is upright.
4. Attach the second hook to the lifting point on the opposite side ramp, then use the winch to raise the side ramp until it is upright.
5. Retract the lift arm cable and lift the hopper up until the transport chain can be connected to the cable diverter plate.
6. Disconnect hydraulic hoses, remove power source, and secure the hose on the auger frame to prevent the hose from damage due to dragging.
Figure 4.1 Remove End Ramp

Figure 4.2 GULP2 Hopper Lift Arm Cable Lifting Points
Figure 4.3 Transport Position, Cable Hooks and Transport Chain Attached

Warning: Ensure that end ramp is removed (as shown)
5. Placement

Before continuing, ensure you have completely read and understood this manual’s Safety chapter, in addition to the safety information in the section(s) below.

This manual is a supplement to the MKX Series Operator Manual. Please ensure that you have read and understood that manual.

5.1. Placement Safety

⚠️ WARNING

- Empty the GULP2 before raising or lowering.
- Move the GULP2 into position slowly. Do not unhitch and attempt to move by hand.

5.2. Placement

**NOTICE** Raise the hopper off of the ground with the power swing hydraulic cylinder while positioning the hopper.

**NOTICE** Ensure that the hopper is fully lowered onto the ground (completely unsupported by the power swing) before driving a truck over the hopper.

**NOTICE** Align the transport vehicle tires with the drive-over ramps. Severe damage will occur to the GULP2 Hopper if the vehicle is not properly aligned.

1. Set up and position the auger and hopper to receive grain.

**NOTICE** If required, adjust the transition-hopper chain positions so that the GULP2 does not drag on the ground when moving the power swing (this will vary for different bin heights).

2. Fully lower the side flaps.

3. Position the grain delivery vehicle for unloading. Ensure the tires are aligned with the drive-over zones on the hopper.

4. Drive the vehicle over the GULP2 Hopper, stopping the vehicle when the grain gate is centred above the hopper conveyor section.

**Important:** Always ensure that the GULP2 conveyor belt is off before driving over the GULP2 hopper to position the grain delivery vehicle.

5. Raise side flaps.
6. Operation

Before continuing, ensure you have completely read and understood this manual’s Safety chapter, in addition to the safety information in the section(s) below.

This manual is a supplement to the MKX Series Operator Manual. Please ensure that you have read and understood that manual.

6.1. Operating Safety

**WARNING**

- Keep away from rotating auger flighting and moving parts, including drive components, shafts, and bearings.
- Always operate with guards, covers, and shields in place.
- Have another trained person nearby who can shut down the equipment in case of accident.
- The work area should be kept clear of bystanders.
- Keep the work area clean and free of debris.
- Ensure maintenance has been performed and is up to date.

6.2. Start-up and Break-in

1. Place all tractor and GULP2 Hopper controls in neutral.
2. Start the tractor and run at low idle.
3. Engage the tractor PTO, then increase the PTO speed of the auger to 540 RPM.
4. Place the tractor hydraulic control lever in detent.
5. Operate the 3-spool valve on the swing tube to turn the GULP2 belt on.
6. Adjust the hydraulic flow rate from the tractor to achieve the desired belt speed of 600-800 ft/min, which is 30-40 belt rotations per minute.

**Note:** If the conveyor speed is too slow, leakage or jamming may occur. If conveyor speed is too fast, the swing arm auger may become plugged.

7. Slowly open the grain gate on the grain supply vehicle. Monitor the transfer of grain into the hopper, and adjust augering speed, GULP2 conveyor speed, and amount of grain discharged from the vehicle grain gate accordingly.
6.3. Operator Controls

Table 6.1 lists the available operator controls for the GULP2 hopper, and Figure 6.1 shows the control locations.

<table>
<thead>
<tr>

</tbody>
</table>

\(^a\) The conveyor belt cannot be operated in reverse due to the check valve installed on the conveyor motor.

Figure 6.1 GULP2 Operator Controls
6.4. Operation - Hydraulic Drive

When Equipped with a Hydraulic Drive

1. Inspect all hydraulic lines, hoses, fittings, and couplers for tightness. Use a clean cloth to wipe any accumulated dirt from the couplers before connecting to the hydraulic system of the tractor.

2. Position the tractor next to the GULP2.

3. Place chocks in the front and rear of each wheel of the tractor, and be sure the hoses are routed out of the way.

4. Connect hydraulic hoses to the couplers.

5. Place all controls in neutral.

6. Start tractor and run at low idle.

7. Place hydraulic control lever in detent.

8. Increase engine speed to rated RPM to produce the required flow. For maximum recommended flow, refer to the Specifications Section.

9. Run until the GULP2 is fully empty.

10. Reduce engine speed to low idle.

11. Place hydraulic control lever in neutral.

12. Shut off tractor engine.

13. Disconnect hydraulics from tractor.

**WARNING** Relieve hydraulic pressure before disconnecting the couplers.

**When starting under load:**

If restarting the GULP2 under load (tube is full), start at low speed since the start-up torque loads are so much higher than normal.

6.5. Set GULP2 Belt Speed

The best results are obtained when the input drive (hydraulic supply) is set to provide a conveyor belt speed of 600-800 ft/min.

Using the belt splice as a reference, count the number of belt revolutions per minute (RPM) to determine belt speed.

- Approximately belt length is 239"
- Belt speed (ft/min) = (RPM \times 239")/12

Between 30-40 belt rotations per minute is ideal.

**Note:** Belt rotation can be also be determined by listening for the audible “click” of the belt lace as it enters the hopper.

6.6. Emergency Shutdown

In an emergency situation:

1. Stop or shut down the power source immediately and lock out all power.

2. Stop the flow of material (if applicable).
3. Ensure the machine components come to a stop before inspecting.
4. Correct the emergency situation before resuming work.

### 6.7. Restarting with a Full Tube

When the GULP2 is shut down inadvertently or due to an emergency, the tube may still be filled with material.

1. With the power source locked out, remove as much of the grain as possible from the tube and intake using a shop vacuum or other tool. Do not use your hands.

   **NOTICE** Starting under load may result in damage to the GULP2 if grain is not removed as much as possible.

2. If guards or covers have been opened or removed, close or replace them before restarting the unit.

3. Once the GULP2 has been started, you may resume normal operation.

### 6.8. Shutdown

**NOTICE** Prolonged operation of an empty auger will cause unnecessary wear.

1. Run the auger and GULP2 Hopper until the hopper and discharge tube are empty.
2. Place the tractor hydraulic controls in neutral.
3. Relieve hydraulic pressure on GULP2 components before disconnecting hydraulic lines from the tractor.

### 6.9. Clean Out

After using your GULP2, follow the clean out steps below to ensure longer belt life and trouble free operation. Failure to clean out the GULP2 can cause build up of product on the belt and roller shafts, causing spillage, roller misalignment, and excess wear/damage to the belt.

**WARNING** Ensure ignition key is removed or power is locked out before cleaning out the GULP2.

1. Remove any product remaining in the hopper and spout with a vacuum or sweep out.
2. Remove debris from shafts, sheaves, and drive belts (as equipped).
3. Once the GULP2 is empty of all product, check for damage on belt and lacing such as notches or cut outs. Any damage on belt may result in product getting under it creating a build-up. If belt replacement and re-lacing is necessary, refer to the Maintenance Section.

**Important:** Ensure the GULP2 is free from all product and debris to prevent build-up. Any build-up on belt and shaft becomes a source of spillage and can cause belt misalignment with the possibility of belt edges sustaining damage on the fixed structure. Build-up on the hopper and spout will cause the belt to wear faster due to drag.

4. Once cleaned out, cover intake to prevent moisture from collecting in hopper.
7. Maintenance

Before continuing, ensure you have completely read and understood this manual’s Safety chapter, in addition to the safety information in the section(s) below.

This manual is a supplement to the MKX Series Operator Manual. Please ensure that you have read and understood that manual.

7.1. Maintenance Safety

- **WARNING**
  - Keep components in good condition. Follow the maintenance procedures.
  - Ensure the service area is clean, dry, and has sufficient lighting.
  - Do not modify any components without authorization from the manufacturer. Modification can be dangerous and result in serious injuries.
  - After maintenance is complete, replace all guards, service doors, and/or covers.
  - Shut down and lock out power before maintaining.
  - Use only genuine Westfield replacement parts or equivalent. Use of unauthorized parts will void warranty. If in doubt, contact the manufacturer or your local dealer.
  - Lower GULP2 fully.
  - Chock wheels.
  - Support tube if performing maintenance on the undercarriage assembly.
  - **If equipped with hydraulics:** Before applying pressure to a hydraulic system, make sure all components are tight and that hoses and couplings are in good condition.

7.2. Maintenance Intervals

For details of service, refer to Section See “Maintenance Procedures” on page 46.

7.3. Fluids and Lubricants

**Grease**
Use SAE multi-purpose high-temperature grease with extreme pressure (EP) performance or SAE multi-purpose lithium-based grease.

**Storage and Handling**
Always follow manufacturer's guidelines for the safe and effective storage and handling of lubricants.

Your machine can operate at top efficiency only if clean lubricants are used. Use clean containers to handle all lubricants. Store them in an area protected from dust, moisture, and other contaminants.

7.4. Maintenance Procedures

7.4.1. Visual Inspection

Before beginning visual inspection, check auger wheels and ensure that all operators are aware of safety procedures.

When inspecting, look for possible defects and for the following:

- Be sure all guards are in place, functioning, and not damaged.
- Make sure access, service, and cleanout covers are in place and secure.
- Check that all hardware is in place and secure.
- Inspect hydraulic hoses and fittings for leaks and wear. Fix or replace where necessary.
- Inspect around the machine for evidence of hydraulic leaks.
- Examine belt and flighting for damage or unusual wear.
- Be sure all safety decals are in place and legible.
- Ensure that the intake area is free of obstructions.

7.4.2. Hydraulic Hose and Coupler Inspection

Using a piece of cardboard or wood, run it along the length of the hose and around all fittings. Replace the hose or tighten/replace the fitting if a leak is found.

**NOTICE** Replacement hose and hose ends must have a minimum strength of 2500 psi (17200 kPa) working pressure.

7.4.3. Machine Greasing

1. Wipe grease fitting with a clean cloth before greasing to avoid injecting dirt and grit.
2. Replace and repair broken fitting immediately.
3. If fitting will not take grease, remove and clean thoroughly. Also clean lubricant passageway. Replace fitting if necessary.
7.4.4. Conveyor Belt Tension

**WARNING** Ensure ignition key is removed or power is locked out before adjusting or servicing your conveyor.

Adjusting your conveyor belt for proper tension helps to ensure trouble-free operation and long belt life.

The GULP 2 is factory-adjusted to provide a conveyor belt deflection of 5" for a 40 lb force pulling up across the top-side of the conveyor belt.

For post-factory adjustment, the conveyor belt needs to be tight enough to not slip on the drive roller, but no tighter. If the belt is too loose, it will slip on the drive roller making a noticeable sound, slowing the belt down.

**WARNING** Failure to stop using a conveyor with a slipping belt will damage it and/or the drive roller lagging. In extreme cases, sections of burnt belt will have to be replaced. This type of damage is not covered by warranty.

To Adjust Belt Tension:

1. Loosen bearing bolts on both sides of the adjustable roller.
2. Advance the adjust bolts on each side equally (use a tape measure to verify) until the conveyor belt is just tight enough to not slip on the drive roller. Do not over-tighten.
3. Tighten bearing bolts fully.

**Figure 7.1. Bearing and Adjust Bolts**
Figure 7.2 Conveyor Belt and Rollers

DRIVE ROLLER

ADJUSTABLE ROLLER
### 7.4.5. Conveyor Belt Alignment

**WARNING** Ensure ignition key is removed or power is locked out before adjusting or servicing conveyor.

If your belt is tracking to one side, use instructions below and follow steps listed to center it.

Some belts may have uneven edges, appearing misaligned. Wait until the belt makes a complete revolution before adjusting rollers.

Ensure that the conveyor is empty of all product before adjusting belt alignment.

<table>
<thead>
<tr>
<th>Rollers</th>
<th>LOOSEN</th>
<th>TIGHTEN</th>

</tr>
<tr>
<td>Stop the conveyor and remove ignition key or lock out the power source.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
5. Inspect Belt Lacing

Inspect condition of the belt lacing, if any clips are worn through, replace all lacing.

**To replace the belt lacing:**

1. Rotate the belting until the lacing is by the hopper or easily accessible.
2. Loosen conveyor belt and remove lacing retainer clip and pin.
3. Using a square and sharp knife, cut lacing off right behind the lacing clips. Cut belt MUST have a square end.
4. Use knife to cut Chevron pattern off 1” back from end of belt. This ensures that the lacing is centered and fully seated on the belt.
5. Use lacing tool to install new lacing clips. Lacing clips are one clip shorter than belt width. For example: the lacing for a 15” wide belt is 14 clips. Center lacing on belt and install lacing as per instructions on lacing tool.
6. Reattach conveyor belt ends together. If required, use a ratchet strap clamped to both ends of belt to cinch belting ends together.

6. Tighten the bearing bolts and nuts.
Figure 7.3 Use Ratchet Strap

7. Install lacing pin and crimp retainer clips onto each end of the lacing pin.
8. Remove ratchet strap and tighten conveyor belt (see “Conveyor Belt Tension”).
9. Check and set belting alignment (see “Conveyor Belt Alignment”).
10. Engage conveyor drive. Allow to run for 30 seconds, then shut down conveyor and inspect lacing.

Figure 7.4 Lacing New Belt

7.4.7. Conveyor Belt Replacement

1. Rotate the belting until the lacing is by the hopper or easily accessible.
2. Move the tension roller to its loosest position.
3. Pull all the slack to the lacing area.
4. Remove the lacing retainer clip and pin (see Figure 7.6).
5. Attach one end of the replacement belt to the belt end being removed, closest to the hopper.
6. Pull the old belt out and the new belt will be threaded into place.
7. Disconnect the old belt.
8. Reattach conveyor belt ends together. If required, use a ratchet strap clamped to both ends of belt to cinch belting ends together.

![Figure 7.5 Use Ratchet Strap](image)

9. Install lacing pin and crimp retainer clips onto each end of the lacing pin.
10. Remove ratchet strap and tighten conveyor belt (see “Conveyor Belt Tension”).
11. Check and set belting alignment (see “Conveyor Belt Alignment”).
12. Engage conveyor drive. Allow to run for 30 seconds, then shut down conveyor and inspect lacing.

# 8. Troubleshooting

The following table lists the causes and solutions to some potential problems you may encounter in operating your GULP2 Hopper.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hopper conveyor belt does not run</td>
<td>Hopper belt loose</td>
<td>Tighten and align belt</td>
</tr>
<tr>
<td></td>
<td>Drive roller lagging worn or damaged</td>
<td>Replace drive roller lagging</td>
</tr>
<tr>
<td></td>
<td>No hydraulic flow is coming from the power source</td>
<td>Turn hydraulics on in tractor</td>
</tr>
<tr>
<td></td>
<td>Belt frozen to tube from operating in high humidity in cold conditions</td>
<td>Remove GULP2 hopper from area of high humidity and warm belt to de-ice</td>
</tr>
<tr>
<td>Excessive belt edge fraying</td>
<td>Belt not aligned</td>
<td>Align and tension belt</td>
</tr>
<tr>
<td>Belt loose</td>
<td>Belt stretches over time</td>
<td>Re-tension belt</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Can also be caused by oily grain/product</td>
</tr>
<tr>
<td>Ramps difficult to lift</td>
<td>Ramps binding in tabs</td>
<td>Check for damage; repair as required</td>
</tr>
<tr>
<td></td>
<td>Obstruction between ramp and ground</td>
<td>Remove obstruction</td>
</tr>
<tr>
<td>Conveyor belt has stopped</td>
<td>Drive chain broken or disconnected</td>
<td>Check the drive chain; repair or replace</td>
</tr>
<tr>
<td></td>
<td>Obstruction in the hopper</td>
<td>Identify and remove obstruction</td>
</tr>
<tr>
<td>Low augering capacity</td>
<td>Incorrect belt speed</td>
<td>Verify and adjust belt speed to appropriate speed</td>
</tr>
<tr>
<td></td>
<td>Hopper belts slipping</td>
<td>Tighten belt (see &quot;Belt Tension Adjustment&quot; on page 36)</td>
</tr>
<tr>
<td>Grain leaking from hopper</td>
<td>Belt is misaligned</td>
<td>Adjust belt aligned (see &quot;Conveyor Belt Alignment&quot; on page 36)</td>
</tr>
<tr>
<td></td>
<td>Misaligned or broken flap lift cable</td>
<td>Check flap lift cable installation and repair as required.</td>
</tr>
<tr>
<td></td>
<td>Broken bungee rope</td>
<td>Check bungee rope installation and repair as required</td>
</tr>
<tr>
<td></td>
<td>Rubber flaps worn or damaged</td>
<td>Replace damaged hopper rubber flaps</td>
</tr>
<tr>
<td>Grain leaking from transition</td>
<td>Belt speed is too slow</td>
<td>Increase belt speed</td>
</tr>
</tbody>
</table>

9.2. OPEN/CLOSED-CENTER VALVE CONVERSION

**Note:** *The standard configuration for the control valve is closed-centre.*

The control valve can be converted between open-centre and closed-centre configurations by installing the appropriate conversion plug.

- Install the closed-center conversion plug (21638) for closed-centre operation.
- Install the open-center conversion plug (22156) for open-centre operation.
Note: Retain the conversion plug that was removed for future use.

Figure 9.1 Conversion Plug Location

9.3. Tightening O-Ring Fittings

1. Inspect o-ring and seat for dirt or obvious defects.
2. On the angle fittings, back the lock nut off until washer bottoms out at top of groove.
3. Hand-tighten fitting until backup washer or washer face (if straight fitting) bottoms on face and o-ring is seated.
4. Position angle fittings by unscrewing no more than one turn.
5. Tighten straight fittings to torque shown.
6. Tighten while holding body of fitting with a wrench.

a. The torque values shown are based on lubricated connections as in reassemble.
9.4. Bolt Torque Values

Tables 9.2 and 9.3 give correct torque values for various bolts and capscrews. The bolt diameter is measured to the outside of the threads. When tightening all bolts, tighten the nut on the bolt to the torque specified in the tables, unless otherwise specified. Do not replace or substitute bolts, nuts, or other hardware that is of lesser strength than the hardware supplied by the manufacturer.

Torque values indicated below are valid for non-greased or non-oiled threads and head, unless otherwise specified. Therefore, do not grease or oil bolts or capscrews unless otherwise specified in this manual. When using locking elements, increase torque values by 5%.

WARRANTY

Westfield Industries Ltd. warrants products of its manufacture against defects in materials or workmanship under normal and reasonable use for a period of one year after date of delivery to the original purchaser.

Our obligation under this warranty is limited to repairing, replacing, or refunding defective part or parts which shall be returned to a distributor or a dealer of our Company, or to our factory, with transportation charges prepaid. This warranty does not obligate Westfield Industries Ltd. to bear the cost of labor in replacing defective parts. Any defects must be reported to the Company before the end of the one year period.

This warranty shall not apply to equipment which has been altered, improperly assembled, improperly maintained, or improperly repaired so as to adversely affect its performance. Westfield Industries Ltd. makes no express warranty of any character with respect to parts not of its manufacture.

The foregoing is in lieu of all other warranties, expressed or implied, including any warranties that extend beyond the description of the product, and the IMPLIED WARRANTY of MERCHANTABILITY is expressly excluded.
